Why attend

Blockchain promises tamper-proof shared records, but only some business problems truly need it. This course explains how blockchain and distributed ledgers work, compares public and private networks, and examines practical enterprise use cases in trade finance, supply chain traceability, digital identity and tokenisation, with a clear framework for deciding when blockchain is the right choice.

Many blockchain projects fail because a shared database would have been enough. You will learn to evaluate use cases objectively and avoid costly mistakes.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

Concept demonstrations, use-case evaluation workshops, case studies of live networks and group business case exercises.

Course objectives

By the end of this course, participants will be able to:
• Explain how blockchain and distributed ledgers work
• Compare public, private and consortium networks
• Evaluate when blockchain adds value
• Analyse enterprise use cases across industries
• Understand smart contracts and tokenisation
• Assess legal, security and governance issues

Target audience

This course is suitable for:
• Innovation and strategy managers
• IT architects and project managers
• Supply chain and trade finance professionals
• Risk and compliance officers
• Consultants and analysts

Course content
