Why attend

Chillers and cooling towers provide essential cooling for buildings, data centres and processes and consume large amounts of energy. This course covers refrigeration cycles, chiller types, cooling tower operation, water treatment and Legionella control, preventive maintenance, performance monitoring, troubleshooting and energy optimisation.

Well-maintained cooling systems use less energy and fail less often. You will learn practical maintenance and optimisation techniques.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

Technical sessions, performance calculations, troubleshooting cases and maintenance plan development.

Course objectives

By the end of this course, participants will be able to:
• Explain refrigeration cycles and chiller types
• Understand cooling tower operation
• Manage water treatment and Legionella risk
• Plan preventive maintenance
• Monitor performance and diagnose faults
• Optimise energy use

Target audience

This course is suitable for:
• HVAC technicians and engineers
• Facility managers
