Why attend

Compressed air is one of the most expensive utilities in industrial plants, and much of it is wasted through leaks and poor practices. This course covers compressed air generation, treatment and distribution, demand analysis, leak detection and repair, pressure optimisation, control strategies, heat recovery and maintenance.

Improving compressed air systems often delivers large energy savings quickly. You will learn to find and capture those savings.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

System audits, leak detection demonstrations, energy calculations and improvement planning.

Course objectives

By the end of this course, participants will be able to:
• Explain compressed air system components
• Measure system demand and efficiency
• Detect and repair leaks
• Optimise pressure and controls
• Recover heat from compressors
• Maintain systems for efficiency

Target audience

This course is suitable for:
• Energy managers
• Maintenance engineers and technicians
• Utility engineers
• Plant managers
• Facility managers
