Why attend

Data is one of an organisation's most valuable assets, but only when it is managed and used with clear purpose. This course helps business leaders define a data strategy that supports organisational goals, from identifying high-value data use cases to establishing governance, data quality, architecture choices, analytics capabilities and a data-driven culture. Participants learn how to prioritise investments, manage risks and measure value, and develop a practical data strategy roadmap that links data initiatives directly to business outcomes.

Many organisations invest in data platforms and dashboards without clear business value. This course gives you a structured approach to data strategy so that investments in data, analytics and AI are prioritised, governed and measured according to the value they create.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

The course combines strategic frameworks with case studies, maturity assessments, use-case prioritisation workshops, governance design exercises and peer review of participants' data strategy roadmaps.

Course objectives

By the end of this course, participants will be able to:
• Explain the components of an effective data strategy
• Identify and prioritise high-value data and analytics use cases
• Establish data governance roles, policies and quality standards
• Understand key data architecture and platform choices
• Build data literacy and a data-driven culture
• Develop a data strategy roadmap with measurable outcomes
