Why attend

Few organisations use a single project approach for every project. Many combine the governance and planning strength of predictive methods with the flexibility and customer focus of agile. This course shows project managers how to select and tailor the right approach, integrate plan-driven and iterative work, manage scope and change, and report progress to stakeholders who expect both predictability and adaptability. Participants apply hybrid techniques to a realistic project case and design a tailored delivery approach for their own projects.

Project managers are often asked to deliver fixed commitments while responding to changing requirements. Hybrid project management offers a practical way to balance control and flexibility. This course gives you the tools to tailor your approach, avoid common pitfalls and lead hybrid projects with confidence.

Professional Problems This Course Is Designed to Solve

• Difficulty translating subject knowledge into practical workplace decisions.
• Inconsistent approaches to the activities covered in the course outline.
• Lack of a structured plan for applying and reviewing new skills.

Course methodology

Learning combines short concept sessions with a running project simulation, planning workshops, agile ceremonies practice, governance case studies and group exercises in tailoring delivery approaches.

Course objectives

By the end of this course, participants will be able to:
• Compare predictive, agile and hybrid project approaches
• Select and tailor the right delivery approach for a project
• Combine milestone planning with iterative delivery
• Manage scope, change and backlog in hybrid environments
• Report progress and risk to traditional governance boards
• Lead teams working with mixed methods
